PROMISE Pegasus J2
Versatility & Portability for Media Pros on the Go

Revolutionary Pegasus J2

We proudly introduce the Pegasus J2, the smallest Thunderbolt™ equipped storage device available, ideal for content creators who want mobility, versatility and the highest performance in a storage solution. Take the hyper-portable J2 in your pocket to any on location site, with or without the power adapter. With blazing throughput, the J2 represents a giant leap in the performance of portable storage devices.

The Fastest Storage in Your Pocket!
Don't let its size fool you, the Pegasus J2 is fast! Configured in a RAID 0 striped set with 2 mSATA SSD, it reaches mind blowing read speeds of over 750MB/s when using the AC power adapter plugged into a power outlet. Plus, you can conveniently switch between using AC Power and Thunderbolt™ Bus Power without interrupting your work. Transfer, playback or edit media directly from this featherweight drive with amazing speed.

Creativity on the Fly
The Pegasus J2 is a dual mSATA SSD (256GB or 512GB) storage mini marvel the size of a smart phone and it weighs just 140 grams. The J2 goes wherever you need to work, away from the studio — even off the grid in Bus-Powered Mode — or use this pocket-sized powerhouse to showcase your portfolio. Small and very fast, the J2 is great for media pros on the go.

Conveniently Runs Without the Power Adapter
The Pegasus J2 can conveniently run using Thunderbolt Bus Power, which means you do not need to use the power adapter. Just the Thunderbolt cable and a computer is enough for high-speed data transfer. To supercharge throughput, plug in the power adapter for maximum performance.* Now you can backup huge files and even edit digital media, on location, on a plane, in transit, wherever you happen to be, at amazing speed.

Note: To achieve maximum throughput of over 750MB/s requires using the Pegasus J2 power adapter plugged into a power outlet.

About Thunderbolt Technology
Thunderbolt technology is a revolutionary, high-speed, dual-protocol I/O technology developed by Intel and Apple, designed for performance, robustness, simplicity, and flexibility. Thunderbolt delivers two channels of 10Gb/s (1.25GB/s) per port of blistering performance. PCI Express (PCIe) expansion bus protocol is integrated with DisplayPort protocol in a single cable for simultaneous data transmission and video output with no performance degradation.

The throughput speed of Thunderbolt enables transfer of terabytes in a small fraction of time of competing connection technologies. The huge bandwidth allows digital media professionals to edit HD video stored on the Pegasus with software (such as Apple Final Cut, Autodesk Smoke, or Adobe Premiere), improve work flow efficiency, and save time and money.

The Pegasus J2 works perfectly with Apple's Time Machine, enabling you to backup critical files, music, pictures, and videos to your Mac. Or when you get back to the office from a busy day on the go, backup all your valuable files at incredible speeds from your J2 to your Pegasus R4/R6.

Pegasus J2	
Picture	
Number of Hard/Drives/SSD	2x6G mSATA SSD
RAID Level	JBOD, RAID 0, 1
Thunderbolt Port	1
Capacity	256GB/ 512GB
Support OS	Mac OS
Dimensions(HxWxL)	2.05x7.4x11(cm)
Weight	140grams
Warranty	2 years

• Thunderbolt cable required (sold separately)
• Thunderbolt and the Thunderbolt logo are trademarks of Intel Corporation in the U.S. and/or other countries
• Preconfigured in RAID 0 using MAC OS X Software RAID
