⤷ In a RAID array setup, we recommend using the enterprise level hard drive as it has much better command timeout control and features stable reliability to vibration compared to desktop one for critical applications.

⤷ Some listed devices may go EOL. AVL listing does not imply market availability.

⤷ BLUE Models are new additions actual in test to this release.

⤷ ORANGE Capacities are assumed to work but were not tested.

⤷ Additional AA-Mux adapter is required when use with SATA 3Gb drive, while SATA 6Gb drive requires BlackJack adapter.

⤷ Verified all listed SATA drives with 3Gb AA-Mux adapter and 6G Blackjack adapter.

⤷ When you use SATA6Gb/s drive with 3Gb AA-Mux adapter in the disk array system, the drive runs at 3Gb/s speed.
