⚠ In a RAID array setup, we recommend using the enterprise level hard drive as it has much better command timeout control and features stable reliability to vibration compared to desktop one for critical applications.

⚠ Some listed devices may go EOL. AVL listing does not imply market availability.

⚠ **BLUE Models are new additions actual in test to this release.**

⚠ **ORANGE Capacities are assumed to work but were not tested.**

⚠ When you use SATA 6Gb/s drive in this disk array system, the drive runs at 3Gb/s speed.

^{*1} Models that currently verified ok only with Microsoft Windows Operating System.
